The striving for something new, for something innovative, for better and better products which will give our customers a decisive competitive edge – that is the pioneering spirit that Berghof Fluoroplastics’ partners and customers have valued for more than five years.

For us, it’s only logical. Because we know: Companies who rest on their laurels soon fall behind. Times change, but our focus as a technological leader stays the same: Together with our partners and customers, we work perpetually to well and truly exploit the great potential of PTFE and to make it useful for the increasing new demands.

With our new production facility, we have created one of the most modern PTFE processing plants of the highest standard. Ideal prerequisites for putting your ideas into practice optimally with familiar or new PTFE applications. Let’s get on with it!

Plenty of space for innovations

In order to measure up to your quality standards and consistently pursue our strategy in the future, we have invested substantially in our headquarters in Eningen. Much more space, top-class working conditions and state-of-the-art machinery – the new building brings Berghof Fluoroplastics a giant step forward at one blow. It is also a clear commitment to the material PTFE, the possibilities of which are far from being exhausted in our opinion, and to Germany as a location.

Because we know: Only our experienced and excellently trained experts are able to use these possibilities consistently, especially in the field of isostatic molding, one of our specialities.

The investment of 5 million Euros, the Berghof Group's biggest single investment in its history, and the other facts and figures make it clear: Our sights are set on growth. Why not grow with us!
